# **PR 8 For My About Page??**

Whoa... something weird happens to my [About page](#). It gets GPR 8 out of 10 scale. While the main domain is still 0. I must have done something very wrong here.

This [SEO for Firefox](#) plugin must have a glitch.

Expect it to drop back to zero in few days, emm... maybe tomorrow. It can't be happening to me. :D

**Update:** An hour later, it dropped to 7. Yeah... I don't mind like all of SEO gurus out there. :P
